

Buy & Sell Real Estate Smart Contract Overview

Introduction

This overview summarizes the Real Estate Buy & Sell Smart Contract. It is intended to provide investors with a clear understanding of the structure, obligations, and benefits of participation. While not a substitute for the full legal contract, it is designed to ensure transparency and eliminate ambiguity.

Investment Framework

The contract establishes a pooled investment vehicle for residential real estate projects. Investors are granted a three-month grace period during which deposits may be made into the pool. At the conclusion of this period, the pool is closed and enters a one-year holding phase. All capital contributed is deployed into residential projects, including custom builds, remodels, and tract homes. Each project incorporates the company's proprietary clean energy generators, which reduce construction costs and provide long-term energy savings for buyers.

Payouts and Proceeds

At the end of the one-year holding period, dividends are distributed to investors on a pro rata basis, calculated according to the amount of each deposit. Investors are entitled to reclaim their proceeds within one year following the conclusion of the lock period. This structure ensures that all participants receive returns proportionate to their contributions.

Redemption Tokens

Each deposit generates a redemption token. These tokens are fully tradable and may be transferred between investors at any time during the holding period. Ownership of a token confers the right to dividends and proceeds, thereby allowing liquidity and flexibility within the investment pool.

Value Proposition

The integration of clean energy generators provides a dual advantage. First, construction costs are reduced, enabling the company to offer properties at more competitive sale prices. Second, buyers benefit from reduced long-term energy expenses, limited to maintenance of the generator unit. This combination enhances market demand and strengthens the return profile for investors.

Rights and Obligations

Investors are entitled to dividends, token trading rights, and the ability to reclaim proceeds within the specified timeframe. The company is obligated to deploy capital exclusively into

qualifying residential projects, to honor token transfers, and to ensure transparent reporting of project progress and dividend distribution.

Company Obligations

The company is obligated to:

- Deploy capital exclusively into qualifying properties.
- Manage properties responsibly to maximize marketability and cost effectiveness.
- Return capital and final proceeds at the end of the holding period.

Conclusion

This contract overview is provided for transparency and clarity. It outlines the essential terms of the Real Estate Buy & Sell Smart Contract and highlights the value created through clean energy integration. The full legal contract governs all rights and obligations, and this overview should be read as a companion document to that agreement.
